

In-Course Assessment Examination - 01
CSH 3153 (T) Human Computer Interaction
Department of Physical Science
University of Vavuniya

Time Allowed: 30 Minutes

Date: 15/11/2023

1. Describe primary goal of Human-Computer Interaction (HCI) in the design of interactive systems, and state why is it important in today's digital age? [20%]
2. Consider the following scenario:
A mobile app development team conducts a heuristic evaluation on their new travel planning app.

Imagine you are part of the mobile app development team, and you're tasked with evaluating the usability of a newly developed travel planning app. The team decides to conduct a heuristic evaluation as one of the usability testing methods.

Explain how this scenario could be adapted for all three usability testing methods: heuristic evaluation, user testing, and survey. [30%]

3. Explain the benefits of incorporating user feedback in addition to heuristic evaluation. How might insights from real users differ from heuristic evaluation findings? [20%]
4. Explain the relationship between usability and user experience. How do they complement each other? [20%]
5. Can a product be considered usable even if the overall user experience is not optimal? Justify your answer. [10%]

In-Course Assessment Examination - 02
CSH 3153 (T) Human Computer Interaction
Department of Physical Science
University of Vavuniya

Time Allowed: **30 Minutes**

Date: 03/01/2024

Imagine you're tasked with designing and testing a new mobile app for ordering food delivery, called "DineQuick." Your target audience is busy young professionals and college students who value convenience and efficiency. You want to ensure DineQuick offers a seamless and user-friendly experience for ordering food from any participating restaurant.

1. Briefly describe three key user-centered design principles you would prioritize while developing DineQuick's interface and functionalities. [15%]
2. Sketch a wireframe of the DineQuick **homepage**, focusing on the search and restaurant selection process and other necessary facts. [25%]
3. State three potential challenges or confusion the user may encounter while using your design. [15%]
4. Choose two different types of usability testing methods you would employ to assess DineQuick. Justify your choices based on their strengths and limitations in this context. [20%]

5. Describe a situation where you would conduct a **remote usability test** for DineQuick.
 - List down the key steps you would take to recruit participants, prepare the testing environment, and analyze the results. [15%]
6. Discuss any two potential biases or limitations might occur during the evaluation of DineQuick and how would you try to mitigate these risks. [10%]
